We can use native cross-referencing, see Figure 1, but for this we **must** use the `typstFix.lua` filter. This allows `fig - tbl - eq -` and `sec -` prefixes to not be considered as Pandoc citations. Note below the figure is the Typst label, there **must** be a newline between the caption and the label.

Figure 1 — This figure uses the Scrivener convention of embedded figure+caption. For Pure Typst we **must** ensure figures are followed by a caption style (see the compiler format for details).

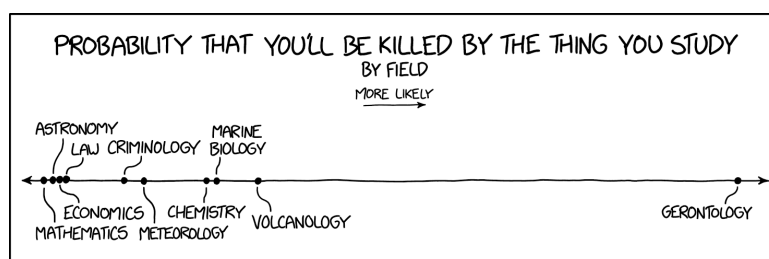

Figure 2 — A figure specified using pure Typst and therefore dropped by HTML-based outputs like Prince. The benefit is we can directly Typst cross-referencing to the figure without needing any filters etc.

The following is **LaTeX maths** (wrapped in a Maths Block style) and is **only** supported by Pandoc intermediates (for Pure Typst compiles it will just compile as code):

$$\frac{d}{dx} \left(\int_a^x f(u) du \right) = f(x).$$

For Typst native maths , we can wrap in a raw typst style so it should get rendered by Typst (note we need to explicitly use the dollar sign):

$$\sum_{k=0}^n k = 1 + \dots + n$$

$$= \frac{n(n+1)}{2}$$
